# **INSPECTION OF COMMERCIAL FEEDINGSTUFFS**

## **Made for the STATE DEPARTMENT OF AGRICULTURE**

The New Hampshire Commercial Feed Law is administered by the Commissioner of Agriculture. All inquiries concerning the law and the registration of feedingstuffs should be addressed to the Feed Control Supervisor, State House, Concord, New Hampshire.

Official samples of feedingstuffs offered for sale in the state are collected under the direction of Honorable Perley I. Fitts, Commissioner of Agriculture, by Mr. George H. Laramie, Control Supervisor, and Mr. Harold Ayer, Assistant Control Supervisor. During the year ending June 30, 1954, 707 official samples were submitted for analysis. These samples represented brands of 165 manufacturers.

### **THE LAW**

The New Hampshire Commercial Feed Law, Chapter 226 of the Laws of the State of New Hampshire, conforms closely to the Uniform Feed Bill proposed by the Association of American Feed Control Officials. Every individual or firm expecting to sell their feed products in New Hampshire should obtain a copy of the leaflet "New Hampshire Commerical Feed Law and Rules and Regulations" from the office of the Department of Agriculture, State House, Concord, New Hampshire. Purchasers of feedingstuffs should read this leaflet for official information concerning the requirements of the law.

*Registration:* Each brand of commercial feed offered for sale in the state must be registered. The term "Commercial feed" refers to "all materials which are distributed for use as feed for animals, other than man, and for wild birds kept in captivity, except (1) unmixed whole seeds and meals made directly from the entire seeds, (2) unground hay and (3) whole or ground straw, stover, silage, cobs, and hulls when not mixed with other materials."

The feedingstuff is usually registered by the manufacturer or jobber whether he is located within or outside the state. Feedingstuffs manufactured in other states are frequently handled by several middlemen before they reach the local distributor. Under the provisions of the law, if the manufacturer or jobber fails to make registration, the dealer is responsible. Dealers who purchase feed for resale must assure themselves that the brands they purchase are properly registered and the license fee paid; otherwise, they must assume that responsibility. The Feed Control Supervisor provides forms to be filed in his office for the registration of feeds. Copy of this form is shown on Page 4.

**New Hampshire**  
**APPLICATION FOR REGISTRATION OF COMMERCIAL**  
**FEEDINGSTUFFS**

No. ....

Date .....

To the Commissioner of Agriculture, State Dept. of Agriculture, Concord, N. H.:

The undersigned hereby makes application for registration—reregistration—supplemental registration of the following commercial feedingstuffs (for the period ending December 31, 19 ):

(List products to be reregistered under heading REREGISTRATIONS. List under heading SUPPLEMENTAL those products added during the year.)

Attached are product data sheets which have affixed thereto a label to be used on, or attached to the containers of feedingstuffs as required by paragraph 1 of Chapter 226, Revised Laws of N. H., Stock Foods Law. I hereby certify that the label or labels contain the information required by the law.

(Enclosed is ..... in the amount of \$..... covering the registration fee for feedingstuffs. Registration fee is \$15.00 for each feedingstuffs.)

Address correspondence to:

Attention ..... Firm Name .....

Street and No. ..... By .....

City and State ..... Title .....

.....

**CERTIFICATE OF REGISTRATION**

This certifies (that the registration fee has been paid and) that the above-listed products are this day registered under the provision of the New Hampshire Stock Foods law, and the sale is authorized when sold, offered or exposed for sale when labeled and otherwise in compliance with the law, until cancelled for cause (for the period beginning with the actual date of registration and continuing until December 31, unless the registration of any feed or feeds are cancelled).

NEW HAMPSHIRE DEPARTMENT OF AGRICULTURE

.....  
**Commissioner**

Date .....

## INSTRUCTIONS

**Application for Registration:** Submit cover sheet in duplicate. One copy will be returned as your Certificate of Registration.

**Product Data Sheet:** One or more (8½" x 11") sheets, to which is affixed a label, or if the label has not been printed, proposed copy or printer's proof may be affixed, for each product to be registered, must accompany the application. Number the attached data sheet pages and insert the page number in parentheses on the cover sheet immediately after the name of the feed.

**Brands:** List these on the application cover sheets under the headings and in the order "Reregistrations" and "New Registrations." (Reregistrations are renewals from the previous year. New Registrations are brands not registered the previous year.)

**Reregistrations:** (Renewals of registrations) require that all cover sheets be renewed. It is not necessary to renew Product Data Sheets except with respect to information which is different from that furnished when the feeds were registered or last reregistered.

**Labeling:** All labeling must be in accordance with New Hampshire Stock Foods law, and all information on cover sheets and data sheets must comply with the above law.

(Note: The above instructions appear on the back of the Application for Registration.)

---

***Labeling:*** The law requires that any commercial feed offered for sale or sold in this state shall furnish on each package a clearly printed statement certifying:

the number of net pounds in the package

the name and principal address of the person  
guaranteeing the commercial feed

the name or brand under which the commercial feed is sold  
the guaranteed analysis stating:

the minimum percentage of crude protein  
the minimum percentage of crude fat  
the maximum percentage of crude fiber

the name of each ingredient contained in the feed

In specialty cases, as in mineral feeds and vitamin supplements, requirements as listed in the law must be met. In the case of bulk deliveries a written or printed statement of the above information shall accompany delivery.

In order to secure greater uniformity in the labeling of feeds and in the statement of ingredients, the Association of American Feed Control Officials has adopted definitions of ingredients and standards. The Asso-

ciation has approved 20 official regulations which "should be adopted by State officials insofar as their statutes will permit." There are no conflicts with the New Hampshire feedingstuffs law in these regulations. Manufacturers and dealers are, therefore, expected to conform to the regulations of the Association in all matters not specifically mentioned in the law. A booklet containing these regulations, together with definitions of ingredients, official and tentative, as well as other instructive material, may be obtained from the Secretary of the Association of American Feed Control Officials, College Park, Maryland. If the definitions and suggestions presented in this booklet are followed by the manufacturer, a correct and accepted list of ingredients complying with the law will appear on the tag. Carelessness or indifference in listing the ingredients should create sales resistance in the buyer. The purchaser will likely conclude that the manufacturer who is inaccurate in specifying the ingredients printed on the tag may be careless in selecting the ingredients he puts into the bag.

### **THE PURPOSE OF THE FEEDINGSTUFFS LAW**

The chief purpose of the feedingstuffs law is to protect the consumer against the inferior products which doubtless would soon appear on the market if the trade were not under state control. The law is primarily a correct-labeling act. It must not be assumed by the purchaser that every brand which meets the manufacturers guarantee is a high-grade feed. The Commercial Feed Law does not prevent the sale of a low grade feed if it is properly licensed and tagged and is offered for sale in compliance with the law. It would not be in the public interest to legislate against the sale of the lower-grade by-products. They can be fed profitably if bought at a price adjusted to their feeding value. The law does prevent an inferior feed being offered for sale as a high-grade product.

The dealer, in purchasing feed from the manufacturer, and the consumer, in purchasing feed from the dealer, should make the specification that the feed delivered must comply with the New Hampshire Commercial Feed Law. If the feed is not registered; if the protein, fat, and crude fiber are not guaranteed; and if the ingredients of which the feed is composed, are not plainly stated on the bag, or on a tag attached thereto, the purchaser is not protected by the law. He has no recourse under the commercial feed law if the feed he purchases is of inferior quality. If the buyer fails to assure himself that the legal requirements have been met, he accepts the feedingstuff at his own risk.

The cost of a feedingstuffs inspection includes the drawing and analysis of samples, and the publication and distribution of the annual bulletin. The funds from which these costs are paid are accumulated from the license fee which the manufacturer is required to pay annually on each brand registered for sale in the state. A calculation based on the known costs of the inspection and the estimated retail value of the feedingstuffs sold annually shows that the cost of the inspection is only a fraction of a cent per 100-pound bag.

The terms used in reporting the chemical analysis of a feedingstuff required by law are briefly defined as follows: PROTEIN is a collective term for a considerable group of compounds, all of which contain nitrogen.

Ingredients high in protein are usually more expensive than the other ingredients, making protein the most important nutrient for consideration in determining the commercial value of a feedingstuff. The nutritional value of the proteins varies widely; therefore, a feedingstuff should contain protein from several sources to insure inclusion of all essential types. FAT is separated from the other components of a feedingstuff by extracting the moisture-free sample with anhydrous ether. In such ingredients as the cereals, the seed-meals, and animal products, the extract is nearly pure fat. A few ingredients such as alfalfa meal contain some ether soluble material which is not fat. If urea is present in a feed, the fat figure may be somewhat high due to the slight solubility of urea in anhydrous ether. When sulphur is present, the "ether extract" or fat found is much too high since sulphur is readily soluble in anhydrous ether. CRUDE FIBER is composed of cellulose and related compounds. Since crude fiber has little feeding value, the law requires that the maximum fiber be guaranteed rather than the minimum as in protein and fat.

Bulk delivery of feed directly from the mixer to the farm continues to increase in volume. The special problems involved in handling this type of delivery by both the manufacturer and consumer can be satisfactorily met. The consumer, considering the acceptance of delivery of feed in bulk, should carefully consider his method of storage and the distribution of feed in his management program. Information is available from both the Experiment Station and the manufacturers concerning the construction of bins to receive bulk delivery of feeds. The analysis of several samples drawn by the feed control supervisor reported in Bulletin 403, 1953 Inspection of Commercial Feedingstuffs, indicate that a satisfactory sample of bulk delivered feeds can be obtained at any one of several points. Further evidence was obtained on this point this year. A series of three samples of each of two brands of feed were drawn by the feed control supervisor representing a lot of each of two types of feed delivered in bulk. The new pneumatic unloading method was used in these cases. The results obtained are shown in Table I. These results confirm previous finding, that is, with reasonable judgment a satisfactory sample of bulk delivered feeds can be obtained at any one of several points in the handling of bulk feeds.

TABLE I

	Sample drawn at point of feed transfer or location	Protein	Fat	Fiber
Brand A	Bulk bin into truck compartment	16.03	5.00	8.21
	Rear of bulk truck	16.03	5.02	7.90
	Manf. bin, equal to farmers bin	16.33	5.35	7.86
Brand B	Bulk bin, into truck compartment	17.38	4.71	3.68
	Rear of bulk truck	17.08	4.70	3.68
	Manf. bin, equal to farmers bin	17.43	4.66	3.60

The difference between results of the analysis of the samples of the same lot in these cases are no more than would be expected in analyzing several samples drawn from the same lot of bagged feed.

The use of medicated feeds for special purposes is steadily increasing in volume. Special directions for feeding are printed on the tag attached to each bag of such feed. When a drug or antibiotic is in a feed, the tag must clearly state that fact. The use of drugs in feeds for the control of certain diseases must be carefully investigated and meet the approval of the Food and Drug Administration before it is put on the market. The laboratory has analyzed many of the feeds tagged as containing sulfaquin-oxaline this year and found no serious deficiencies.

It is not within the scope of this bulletin to make recommendations regarding the use of commercial feedingstuffs. The Department of Dairy Husbandry and the Department of Poultry Husbandry are continuously studying feeding problems. The following publications of these departments are free to residents of New Hampshire. Address your request to Mail Service, University of New Hampshire, Durham, New Hampshire.

- |                |                                            |
|----------------|--------------------------------------------|
| Ext. Bull. 67  | Turkey Production in New Hampshire, 16 pp. |
| Ext. Cir. 274  | Brooding and Rearing Chickens, 20 pp.      |
| Ext. Cir. 282  | Dairy Calves.                              |

| Ext. Bull. 114 | Feeding Dairy Cattle.                      |

While the word feedingstuff does not appear in all the above titles, no publication is included which does not discuss some aspect of the use of feedingstuffs.

Inquiries occasionally are made regarding a method of calculating the protein, fat or fiber content of a home-mixed feed. There are tables available, such as those in Morrison's book "Feeds and Feeding," which give the average chemical analysis of feed concentrates, roughage, and silages. It should be pointed out that the chemical analysis of a particular lot of an ingredient may be somewhat above or below the average figure shown in the table. This fact must be taken into consideration in fixing guarantees. The following example shows how the protein content of a feed mixture may be calculated.

Ingredients	pounds used	x	percent protein in ingredient	=	lbs. protein furnished by ingredient
Ground Oats	200		12.0		24
Ground Corn	400		8.0		32
Gluten Feed	300		25.0		75
Wheat Bran	400		15.0		60
Linseed Oil Meal	100		34.0		34
Salt	10		..		..
Total Mix	1410 lbs.		contains		225 lbs. protein

$$\text{The mixture contains } \frac{225}{1410} \times 100 = 15.95\% \text{ protein.}$$

The percentage of fat or fiber may be calculated in a like manner by substituting the fat or fiber figures for those of the protein.

## **CONFORMITY TO THE GUARANTEES**

The chemical analyses reported in this bulletin were made by the methods approved by the Association of Official Agricultural Chemists. Of the 707 samples analyzed, 667 were ingredients and mixed feeds, and 40 were canned cat and/or dog foods. Forty-three brands were sampled at two or more different times during the year. In addition, 6 samples were submitted for analysis in a special study of the bulk sampling problem. These six samples all met the guarantee.

Table II shows the percentage of samples not conforming to guarantees over a period of years. A distinct improvement is noted in 1954. Of the analyses reported in this bulletin of the 707 samples submitted, 8.8 percent contained less protein, 5.2 percent contained less fat and 3.8 percent contained more fiber than was guaranteed.

It is common practice to indicate by different type those brands failing to conform to the guarantee by an arbitrary amount. In this bulletin the analytical figures,  $\frac{1}{2}$  percent or more below guarantee in protein,  $\frac{1}{4}$  percent or more below in fat, and one percent or more above guarantee in crude fiber, are printed in bold face type. The brands *not* registered with the Control Supervisor at the time of sampling are indicated by means of an asterisk before the brand name.

TABLE II

**PERCENTAGE OF SAMPLES ANALYZED IN  
YEARS 1926-1954 NOT CONFORMING TO GUARANTEES**

Year	Per cent below guarantee in Protein		Per cent below guarantee in Fat		Per cent high in Crude Fiber
	LESS THAN 0.5 PER CENT	0.5 PER CENT OR MORE	LESS THAN 0.25 PER CENT	0.25 PER CENT OR MORE	
1926	8.0	16.0	4.0	10.0	6.0
1927	8.3	16.4	5.8	13.6	5.9

1952	4.3	8.4	3.0	5.8	4.3
1953	4.3	12.7	3.4	6.8	4.4
1954	2.7	6.1	1.7	3.5	3.8

## **REQUEST BY INDIVIDUALS FOR THE ANALYSIS OF FEEDINGSTUFFS**

In addition to the official samples of feedingstuffs submitted by the Feed Control Supervisor, the Agricultural Experiment Station each year analyzes some samples drawn by individuals to aid in solving a particular problem. Chemical analysis can aid in certain cases but it should not be expected to answer all questions. A close study of management practices will often answer many problems when the first thing to do seems to blame the feed for difficulties in growth or production of livestock. It is suggested that in the case of a difficulty involving feeding that you call in your County Agent, your veterinarian or the fieldman of your feed supplier to consider your problem. They will then obtain the facts in the case and will determine whether an analysis of the feed will be of help or not.

If a feed sample is mailed or brought to the laboratory, it is essential that the sample drawn, about one pint put in a clean, tight container, *adequately represents* the large lot from which it is drawn and that *full information* concerning the case accompany the sample. If this is not done, it must be supplied before analysis can be made. Because of the cost of laboratory work and materials, the necessity for an analysis is decided upon the basis of information submitted and an opinion obtained as to whether or not an analysis is necessary in the particular case involved. Since this is a state experiment station, this service is available only to residents of this state and no charge is made for this occasional work. Many questions that are raised may be satisfactorily answered by correspondence without laboratory work.
